

Resorcinol

m-Dihydroxybenzeno; *m*-Dihydroxybenzene; Dioxybenzolum; Resorcin; Resorcina; Résorcinol; Resorcinolum; Resorsinoli; Rezorcín; Rezorcínolis; Rezorcynol. Benzene-1,3-diol.

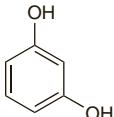

Резорцинол

$C_6H_4O_2 = 110.1$.

CAS — 108-46-3.

ATC — D10AX02; S01AX06.

ATC Vet — QD10AX02; Q501AX06.

Pharmacopoeias. In Chin., Eur. (see p.vii), and US.

Ph. Eur. 6.2 (Resorcinol). Colourless or slightly pinkish-grey crystals or crystalline powder. M.p. 109° to 112°. It becomes red on exposure to air and light. Very soluble in water and in alcohol. Protect from light.

USP 31 (Resorcinol). White or practically white, needle-shaped crystals or powder with a faint characteristic odour. M.p. 109° to 111°. It acquires a pink tint on exposure to air and light. Soluble 1 in 1 of water and of alcohol; slightly soluble in chloroform; freely soluble in ether and in glycerol. A 5% solution in water is neutral or acid to litmus. Protect from light.

Incompatibility. Resorcinol is incompatible with ferric salts.

Resorcinol Monoacetate

Acetato de resorcina; Resorcin Acetate; Resorcinol, monoacetato de. 3-Acetoxyphenol.

Резорцинола Монацетат

$C_8H_8O_3 = 152.1$.

CAS — 102-29-4.

ATC — D10AX02; S01AX06.

ATC Vet — QD10AX02; Q501AX06.

Pharmacopoeias. In US.

USP 31 (Resorcinol Monoacetate). A pale yellow or amber, viscous liquid with a faint characteristic odour. Sparingly soluble in water; soluble in alcohol and in most organic solvents. A saturated solution in water is acid to litmus. Store in airtight containers. Protect from light.

Adverse Effects, Treatment, and Precautions

Resorcinol is a mild irritant and may result in skin sensitisation. It should not be applied to large areas of the body, for prolonged periods, or in high concentrations, especially in children, as it is absorbed through intact skin as well as broken skin and may interfere with thyroid function or produce methaemoglobinæmia. Resorcinol may produce hyperpigmentation in patients with dark skins and may darken light-coloured hair. Systemic toxic effects of resorcinol are similar to those of phenol and are treated accordingly (see p.1656) but convulsions may occur more frequently.

Abnormal coloration. Resorcinol could cause green discolouration of the urine.¹

1. Karlstrand J. The pharmacist and the ostomate. *J Am Pharm Assoc* 1977; NS17: 735-8.

Uses and Administration

Resorcinol has keratolytic properties and has been used, usually with sulfur, in topical preparations for the treatment of acne (p.1577) and seborrhœic skin conditions (p.1584), although other treatments are generally preferred.

Resorcinol has also been used in preparations for the treatment of anorectal disorders often complexed with bismuth compounds (see Haemorrhoids, p.1697).

Resorcinol monoacetate has been used similarly but may provide a milder action with a longer duration.

Dentistry. Resorcinol powder added incrementally to a few drops of formaldehyde 40% solution to saturation and polymerised using 1 or 2 drops of sodium hydroxide 10% solution produces a hard red material, known as "Russian Red". This resin has been used in dentistry in eastern Europe, Russia, and China. Zinc oxide or barium sulfate is often added to the mixture before polymerisation to make it radio-opaque.¹

tients with impaired peripheral circulation or diabetes; caution has also been suggested if caustic preparations are used in patients with significant peripheral neuropathy. The drug is readily absorbed through the skin, and symptoms of acute systemic salicylate poisoning (see Aspirin, p.20) have been reported after excessive use; deaths have occurred, mainly in children. To minimise absorption after topical application salicylic acid should not be used for prolonged periods, in high concentrations, on large areas of the body, or on inflamed or broken skin. Contact with mouth, eyes, and other mucous membranes should be avoided.

Uses and Administration

Salicylic acid has **keratolytic** properties and is applied topically in the treatment of hyperkeratotic and scaling skin conditions such as dandruff and seborrhœic dermatitis (p.1584), ichthyosis (p.1580), psoriasis (p.1583), and acne (p.1577). Preparations usually contain between 2 and 6% salicylic acid, but a wider range of concentrations has been used. It is often used with other drugs, notably coal tar.

Preparations containing up to 60% salicylic acid have been used as a **caustic** for the removal of plantar warts (p.1584), corns, or calluses; surrounding healthy skin should be protected (see above).

Salicylic acid also possesses **fungicidal** properties and is used topically in the treatment of dermatophyte skin infections (see p.521); propyl salicylate and bromosalicylic acid have been used similarly.

Zinc salicylate has been used similarly to salicylic acid in the treatment of seborrhœic dermatitis and acne.

Preparations

BP 2008: Coal Tar and Salicylic Acid Ointment; Compound Benzoic Acid Ointment; Dithranol Paste; Salicylic Acid Collodion; Salicylic Acid Ointment; Zinc and Salicylic Acid Paste;

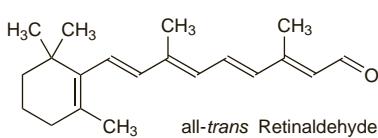

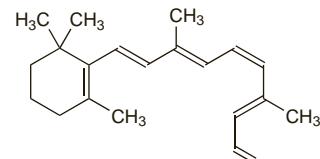

BPC 1973: Salicylic Acid and Sulphur Ointment;

USP 31: Benzoic and Salicylic Acids Ointment; Salicylic Acid Collodion; Salicylic Acid Gel; Salicylic Acid Plaster; Salicylic Acid Topical Foam; Zinc Oxide and Salicylic Acid Paste.

Salicylic Acid

Acide salicylique; Acido Ortóxibenzoico; Acidum salicylicum; Kwas salicylowy; Kyselina salicylová; Saliclico, ácido; Salicilo rūgtis; Salicylyra; Salisilik Asit; Salisylihappo; Salizylsäure; Szalisilcás 2-Hydroxybenzoic acid.

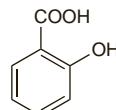

Салициловая Кислота

$C_7H_6O_3 = 138.1$.

CAS — 69-72-7.

ATC — D01AE12; S01BC08.

ATC Vet — QD01AE12; Q501BC08.

Pharmacopoeias. In Chin., Eur. (see p.vii), Int., Jpn, US, and Viet.

Ph. Eur. 6.2 (Salicylic Acid). White or colourless acicular crystals or a white or almost white, crystalline powder. Slightly soluble in water; freely soluble in alcohol; sparingly soluble in dichloromethane. Protect from light.

USP 31 (Salicylic Acid). White crystals, usually in fine needles or a white, fluffy, crystalline powder. The synthetic form is white and odourless but if prepared from natural methyl salicylate it may have a slightly yellow or pink tint, and a faint, mint-like odour. Soluble 1 in 460 of water, 1 in 15 of boiling water, 1 in 3 of alcohol, 1 in 45 of chloroform, 1 in 3 of ether, and 1 in 135 of benzene.

Adverse Effects and Precautions

Salicylic acid is a mild irritant and application of salicylic acid preparations to the skin may cause dermatitis. Preparations containing high concentrations of salicylic acid can cause skin ulceration or erosion; healthy skin surrounding warts, corns, and calluses should be protected with soft paraffin or specially designed plasters when such preparations are being used. Salicylic acid should be used with care on the extremities of pa-

rents. Salicylic acid may cause hypoglycaemia in diabetics. It may cause hypotension, tachycardia, and respiratory depression. It may cause hyperventilation, tachypnoea, and circulatory collapse. It may cause hypoglycaemia, tachycardia, and respiratory depression. It may cause hyperventilation, tachypnoea, and circulatory collapse.
