Troleandomycin (BAN, USAN, rINN)

NSC-108166; Triacytyleandomycin; Troleandomicina; Troleandomisin; Troléandomycine; Troleandomycinum; Troleandomysini. The triacetyl ester of oleandomycin .

Тролеандомицин

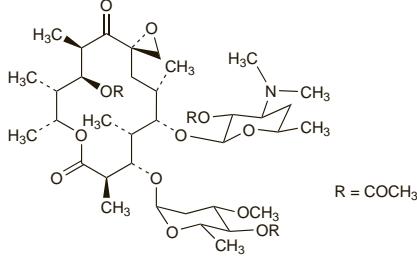

$C_{41}H_{67}NO_{15}$ = 814.0.

CAS — 2751-09-9.

ATC — J01FA08.

ATC Vet — QJ01FA08.

The symbol † denotes a preparation no longer actively marketed

Pharmacopoeias. In Fr. and US.

USP 31 (Troleandomycin). A white, odourless, crystalline powder. It contains the equivalent of not less than 750 micrograms of oleandomycin per mg. Slightly soluble in water and in ether; freely soluble in alcohol; soluble in chloroform. A 10% solution in alcohol and water (1:1) has a pH of 7.0 to 8.5. Store in airtight containers.

Profile

Troleandomycin is a prodrug of the macrolide antibacterial oleandomycin that has actions similar to those of erythromycin (p.269). It has been given orally in the treatment of susceptible infections although more effective antibiotics are generally preferred.

Preparations

USP 31: Troleandomycin Capsules.

Proprietary Preparations (details are given in Part 3)
ital.: Triacetin†; **Turk.:** Teknisin; **USA:** TAO†.

Trospectomycin Sulfate (USAN, rINN)

Sulfato de trospectomicina; Trospectomycin Sulphate (BANM); Trospectomycine, Sulfate de; Trospectomycini Sulfas; U-63366 (trospectomycin); U-63366f. (2R,4aS,5aR,6S,7S,8R,9aR,10aS)-2-Butyl-4a,7,9-trihydroxy-6,8-bis(methylamino)perhydro-pyran[2,3-b][1,4]benzodioxin-4-one sulphate pentahydrate. Троспектомицина Сульфат

$C_{21}H_{30}N_2O_7 \cdot H_2O \cdot SO_4 \cdot 5H_2O = 562.6$.
CAS — 88669-04-9 (trospectomycin); 88851-61-0 (trospectomycin sulfate).

Profile

Trospectomycin is a water-soluble derivative of spectinomycin (p.332) but is more active against Gram-positive organisms, *Haemophilus influenzae*, and *Chlamydia trachomatis* as well as *Neisseria*. It has been investigated in various infections and given as the sulfate intravenously or intramuscularly. Reported adverse effects include perioral paraesthesia, pain at the injection site, nausea, and dizziness.

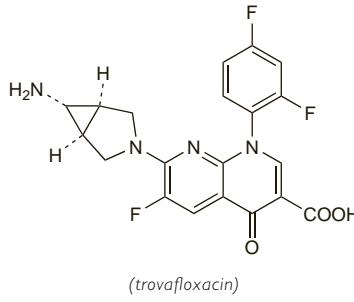

Trovafloxacin Mesilate (rINN)

CP-99219-27; CP-99219 (trovafloxacin); Mesilato de trovafloxacin; Trovafloxacin Mesylate (USAN); Trovafloxacine, Mésilate de; Trovafloxaci Mésilas. 7-[(1R,5S,6S)-6-Amino-3-azabicyclo[3.1.0]hex-3-yl]-1-(2,4-difluorophenyl)-6-fluoro-1,4-dihydro-4-oxo-1,8-naphthyridine-3-carboxylic acid monomethanesulphonate.

Тровофлоксацина Мезилат

$C_{20}H_{15}F_3N_4O_3 \cdot CH_4O_3S = 512.5$.
CAS — 147059-72-1 (trovafloxacin); 147059-75-4 (trovafloxacin mesilate).
ATC — J01MA13.

ATC Vet — QJ01MA13.

Adverse Effects and Precautions

As for Ciprofloxacin, p.244.

Dizziness was the most common adverse effect reported with trovafloxacin.

Trovafloxacin preparations have been withdrawn worldwide after reports of unpredictable severe hepatic adverse effects, including some fatalities. Symptomatic pancreatitis was also reported.

Antimicrobial Action

As for Ciprofloxacin, p.246. It is more active against pneumococci.

Pharmacokinetics

Trovafloxacin is readily absorbed from the gastrointestinal tract after an oral dose, peak plasma concentrations occurring after about 1 to 2 hours. After intravenous use, alatrofloxacin is rapidly converted to trovafloxacin. Oral bioavailability is 88%. Trovafloxacin is widely distributed into body tissues and is about 76% bound to plasma proteins. It appears in breast milk.

The serum half-life of trovafloxacin ranges from about 9 to 12 hours. Trovafloxacin is metabolised by conjugation, 13% of a dose appearing in the urine as the glucuronide and 9% in the faeces as the *N*-acetyl metabolite; other metabolites appear in both the urine and faeces in minor amounts, but about 50% of an oral dose is excreted unchanged, mainly in the faeces but also in the urine.

Uses and Administration

Trovafloxacin is a fluoroquinolone antibiotic with actions and uses similar to those of ciprofloxacin (p.247). It was given orally as the mesilate for the treatment of susceptible infections. The prodrug alatrofloxacin (p.200) was used as the mesilate for intravenous infusion.

Trovafloxacin and alatrofloxacin preparations have been withdrawn worldwide after reports of unpredictable severe hepatic adverse effects, including some fatalities.

Preparations

Proprietary Preparations (details are given in Part 3)
Canad.: Trovant; **Gr.:** Trovan†; **Mex.:** Trovan†; **USA:** Trovant.

Tulathromycin (USAN, rINN)

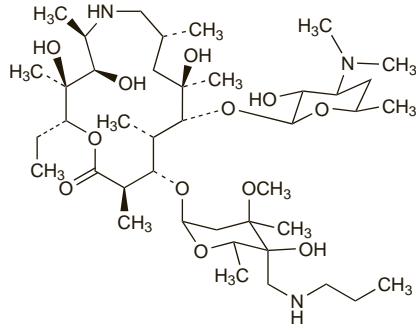

CP-472295 (component A); CP-547272 (component B); Tulathromycin; Tulathromycinum; Tulatromicina.

Тулатромицин

$C_{41}H_{79}N_3O_{12} = 806.1$.

CAS — 217500-96-4 (component A); 280755-12-6 (component B).

ATC Vet — QJ01FA94.

Tylosin (BAN, rINN)

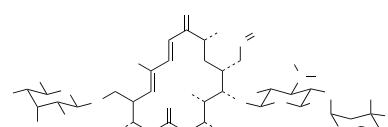

Tilosina; Tilozin; Tylosini; Tylosine; Tylosinum; Tylozyna.

Тиозин

$C_{46}H_{77}NO_{17} = 916.1$.

CAS — 1401-69-0.

ATC Vet — QJ01FA90; QJ51FA90.

(tylosin A)

Pharmacopoeias. In Eur. (see p.vii) and US, both for veterinary use.

Ph. Eur. 6.2 (Tylosin for Veterinary Use; Tylosin BP 2008; Tylosin BP(Vet) 2008). A mixture of macrolide antibiotics produced by a strain of *Streptomyces fradiae* or by any other means. The main component of the mixture is tylosin A, but tylosin B (desmycosin), tylosin C (macrocin), and tylosin D (relomycin) may also be present. An almost white or slightly yellow powder. Slightly soluble in water; freely soluble in dehydrated alcohol and in dichloromethane. It dissolves in dilute solutions of mineral acids. A 2.5% suspension in water has a pH of 8.5 to 10.5. Protect from light.

USP 31 (Tylosin). A macrolide antibiotic substance or mixture of such substances produced by the growth of *Streptomyces fradiae* or by any other means. A white to buff-coloured powder. Slightly soluble in water; soluble in alcohol, in amyl acetate, in chloroform, and in dilute mineral acids; freely soluble in methyl alcohol. It loses not more than 5% of its weight on drying. Protect from light, moisture, and temperatures exceeding 40°.

Tylosin Tartrate (BANM, rINN)

Tartrato de tirosina; Tilozin-tartárt; Tylosinitartraatti; Tylosin tartrát; Tylosine, tartrate de; Tylosini tartras; Tylosintartrat; Tylozy ny winian.

Тиозина Тартрат

(C₄₆H₇₇NO₁₇)₂C₄H₆O₆ = 1982.3.
CAS — 1405-54-5.

Pharmacopoeias. In Eur. (see p.vii) and US for veterinary use.

Ph. Eur. 6.2 (Tylosin Tartrate for Veterinary Use; Tylosin Tartrate BP 2008; Tylosin Tartrate BP(Vet) 2008). An almost white or slightly yellow hygroscopic powder. Freely soluble in water and in dichloromethane; slightly soluble in dehydrated alcohol. It dissolves in dilute solutions of mineral acids. A 2.5% solution in water has a pH of 5.0 to 7.2. Store in airtight containers. Protect from light.

USP 31 (Tylosin Tartrate). A tartrate of a mixture of macrolide antibiotic substances, or the mixture of such substances, produced by the growth of *Streptomyces fradiae*, or by any other means. Its potency is not less than 800 micrograms of tylosin per mg, calculated on the dried basis.

An almost white or slightly yellow, hygroscopic powder. Freely soluble in water and in dichloromethane; slightly soluble in alcohol. It dissolves in dilute solutions of mineral acids. pH of a 2.5% solution in water is between 5.0 and 7.2. Store in airtight containers at a temperature of 25°, excursions permitted between 15° and 30°. Protect from light.

Profile

Tylosin is a macrolide antibiotic with actions similar to those of erythromycin (p.269). Tylosin and its phosphate and tartrate salts are used in veterinary medicine in the prophylaxis and treatment of infections caused by susceptible organisms.

Tylosin and tylosin phosphate have been added to animal feeding stuffs as growth promoters for pigs.

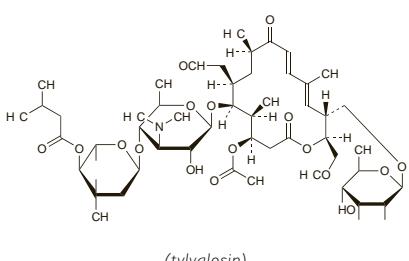

Tylvalosin Tartrate (USAN, rINN)

Acetyl Isovaleryl Tylosin Tartrate; Acetylisovaleryltylosin Tartrate; Tartrato de tilvalosina; Tilvalosine, Tartrate de; Tylvalosini Tartras. (4R,5S,6S,7R,9R,11E,13E,15R,16R)-15-[(6-Deoxy-2,3-di-O-methyl-β-D-allopyranosyl)oxy]methyl]-6-[(3,6-dideoxy-4-O-[2,6-dideoxy-3-C-methyl-4-O-(3-methylbutanoyl)-α-L-ribo-hexopyranosyl]-3-(dimethylamino)-β-D-glucopyranosyl)oxy]-16-ethyl-5,9,13-trimethyl-2,10-dioxo-7-(2-oxoethyl)oxacyclohexadeca-1,13-dien-4-yl acetate (2R,3R)-2,3-dihydroxybutanedioate.

Тильтвалозина Тартрат

C₅₃H₈₇NO₁₉X₄C₄H₆O₆.
CAS — 63409-12-1 (tylvalosin); 63428-13-7 (tylvalosin tartrate).

ATC Vet — QJ01FA92.

Profile

Tylvalosin is a derivative of tylosin (p.357) and is used similarly as the tartrate in veterinary medicine.

Tyrothricin (BAN, rINN)

Tirotricina; Tirotricinas; Tirotrisin; Tyrothricine; Tyrothricinum; Tyrotricin; Tyrotrisiini.

Тиротрицин

CAS — 1404-88-2.

ATC — D06AX08; R02AB02; S01AA05.

ATC Vet — QD06AX08; QR02AB02; QS01AA05.

Gramicidin	Mol. Formula	X	Y
A1	C H N O	-Val	-Trp
A2	C H N O	-Ile	-Trp
C1	C H N O	-Val	-Tyr
C2	C H N O	-Ile	-Tyr

Tyrocidin	Mol. Formula	X	Y	Z
A	C H N O	-Phe	-Phe	-Tyr
B	C H N O	-Trp	-Phe	-Tyr
C	C H N O	-Trp	-Trp	-Tyr
D	C H N O	-Trp	-Trp	-Trp
E	C H N O	-Phe	-Phe	-Phe

Pharmacopoeias. In Eur. (see p.vii) and US.

Ph. Eur. 6.2 (Tyrothricin). A mixture of antimicrobial linear and cyclic polypeptides, isolated from the fermentation broth of *Bacillus brevis*. It consists mainly of gramicidins and tyrocidines; other related compounds may be present in smaller amounts. The potency is 180 to 280 international units/mg, calculated with reference to the dried substance. A white or almost white powder. Practically insoluble in water; soluble in alcohol and in methyl alcohol. Store in airtight containers. Protect from light.

USP 31 (Tyrothricin). An antibacterial substance produced by the growth of *Bacillus brevis*. It is a mixture consisting chiefly of gramicidin and tyrocidine, the latter being usually present as the hydrochloride. Store in airtight containers.

Adverse Effects and Precautions

Tyrothricin is too toxic to be used systemically; effects that have been reported include hepatic and renal toxicity as well as Stevens-Johnson syndrome. It damages the sensory epithelium of the nose and instances of prolonged loss of smell have occurred after its use as a nasal spray or instillation. Tyrothricin should not be instilled into the nasal cavities or into closed body cavities.

Uses and Administration

Tyrothricin is unsuitable for systemic use. It is active *in vitro* against many Gram-positive bacteria and has been used either alone or with other antibiotics in the local treatment of infections mainly of the skin and mouth.

Preparations

Proprietary Preparations (details are given in Part 3)

F: Codetricine[†]; **Ger.:** Tyrosur; **Gr.:** Triciderm; **Hong Kong:** Tyrosur[†]; **Ital.:** Faringotricia; Hydrotricina; Rinotricia; **Port.:** Hydrotricina; **Turk.:** Hydrotricina.

Valnemulin (BAN, rINN)

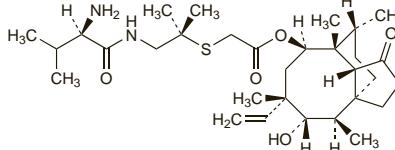

Valhemulini; Valhemulina; Valnémuline; Valhemulinum. ((2-[*R*]-2-Amino-3-methylbutyramido)-1,1-dimethyllethyl)thio)acetic acid 8-ester with (3*A*3,4*R*,5*S*,6*S*,6*R*,9*R*,9*A*,10*R*)-octahydro-5,8-dihydroxy-4,6,9,10-tetramethyl-6-vinyl-3*A*,9-propeno-3*A*H-cyclopentacycloocten-1(*H*)-one.

Вальнемулин

C₃₁H₅₂N₂O₅S = 564.8.

CAS — 101312-92-9 (valnemulin); 133868-46-9 (valnemulin hydrochloride).

ATC Vet — QJ01XQ02.

Pharmacopoeias. Eur. (see p.vii) includes the hydrochloride for veterinary use.

Profile

Valnemulin is an antibacterial used as the hydrochloride in veterinary medicine.

Vancomycin (BAN, rINN)

Vancomicina; Vancomycine; Vancomycinum; Vankomycin; Vankomysini. (S₅)-(35,6R,7R,22R,23S,23,26,36R,38aR)-44-[(2-O-(3-Amino-2,3,6-trideoxy-3-C-methyl-α-L-lyxo-hexopyranosyl)-β-D-glucopyranosyl)oxy]-3-(carbamoylmethyl)-10,19-dichloro-2,3,4,5,6,7,23,24,25,26,36,37,38,38a-tetradecahydro-7,22,28,30,32-pentahydroxy-6-[2(R)-4-methyl-2-(methylamino)valeramido]-2,5,24,38,39-pentaoxo-22H-8,11:18,21-diepo-23,36-(iminomethano)-13,16S,35-dimetheno-1H,16H-[1,6,9]oxadiazacyclohexadeceno[4,5-m][10,2,16]-benzoxadiazacyclotetrasocine-26-carboxylic acid.

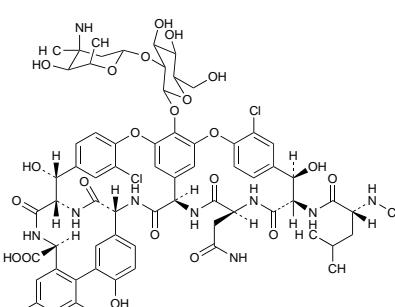

Ванкомицин

C₆₆H₇₅Cl₂N₉O₂₄ = 1449.3.

CAS — 1404-90-6.

ATC — A07AA09; J01XA01.

ATC Vet — QA07AA09; QJ01XA01.

Description. A glycopeptide antimicrobial substance or mixture of glycopeptides produced by the growth of certain strains of *Amycolatopsis orientalis* (*Nocardia orientalis*, *Streptomyces orientalis*), or by any other means.

Pharmacopoeias. In US.

USP 31 (Vancomycin). Store in airtight containers.

Vancomycin Hydrochloride (BANM, rINN)

Hydrocloruro de vancomicina; Vancomycine, chloride de; Vancomycin-hydrochloride; Vancomycini hydrochloridum; Vankomycinhydroklorid; Vankomicino hidrochloridas; Vankomisin Hydroklorür; Vankomycinhidroklorid; Vankomysi hidroklorid; Wankomycyn hydroklorid; Vankomycyn hydroklorid; Wankomycyn hydroklorid.

Ванкомицина Гидрохлорид

C₆₆H₇₅Cl₂N₉O₂₄,HCl = 1485.7.

CAS — 1404-93-9.

ATC — A07AA09; J01XA01.

ATC Vet — QA07AA09; QJ01XA01.

Pharmacopoeias. In Eur. (see p.vii), Jpn, and US.

Ph. Eur. 6.2 (Vancomycin Hydrochloride). A mixture of related glycopeptides, consisting principally of vancomycin B, a substance produced by certain strains of *Amycolatopsis orientalis* or obtained by any other means. A white or almost white, hygroscopic powder. Freely soluble in water; slightly soluble in alcohol. A 5% solution in water has a pH of 2.5 to 4.5. Store in air-
