Thin-layer chromatography

A. Infrared absorption spectrophotometry

B. Thin-layer chromatography

C. Place about 2 mg in a test-tube about 150 mm long and about 15 mm in diameter. Moisten with 0.05 mL of water R and add 2 mL of sulfuric acid-formaldehyde reagent R. Mix the contents of the tube by swirling; the solution is practically colourless. Place the test-tube in a water-bath for 1 min; a dark yellow colour develops.

Drying: in air.

Detection: expose to iodine vapour until the spots appear and examine in daylight.

System suitability: reference solution (b):
- the chromatogram shows 2 clearly separated spots.

Results: the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

C. Place about 2 mg in a test-tube about 150 mm long and about 15 mm in diameter. Moisten with 0.05 mL of water R and add 2 mL of sulfuric acid-formaldehyde reagent R. Mix the contents of the tube by swirling; the solution is practically colourless. Place the test-tube in a water-bath for 1 min; a dark yellow colour develops.

TESTS

Solution S. With the aid of ultrasound or gentle heating, dissolve 0.100 g in carbon dioxide-free water R and dilute to 50.0 mL with the same solvent.

Appearance of solution. The solutions are not more opalescent than reference suspension II (2.2.1).

Dissolve 1.0 g in 10 mL of 0.5 M hydrochloric acid. Dissolve separately 1.0 g in 10 mL of dilute ammonia R2. Examine immediately after dissolution.

pH (2.2.3): 3.5 to 5.5 for solution S.

Specific optical rotation (2.2.7); +290 to +315 (anhydrous substance), determined on solution S.

Related substances. Liquid chromatography (2.2.29).

Buffer solution pH 5.0. To 250 mL of 0.2 M potassium dihydrogen phosphate R add dilute sodium hydroxide solution R to pH 5.0 and dilute to 1000.0 mL with water R.

Test solution (a). Dissolve 30.0 mg of the substance to be examined in mobile phase A and dilute to 50.0 mL with mobile phase A.

Test solution (b). Dissolve 30.0 mg of the substance to be examined in mobile phase A and dilute to 20.0 mL with mobile phase A. Prepare immediately before use.

Reference solution (a). Dissolve 30.0 mg of amoxicillin trihydrate CRS in mobile phase A and dilute to 50.0 mL with mobile phase A.

Reference solution (b). Dissolve 4.0 mg of cefadroxil CRS in mobile phase A and dilute to 50 mL with mobile phase A. To 5.0 mL of this solution add 5.0 mL of reference solution (a) and dilute to 100 mL with mobile phase A.

Reference solution (c). Dilute 2.0 mL of reference solution (a) to 20.0 mL with mobile phase A. Dilute 5.0 mL of this solution to 20.0 mL with mobile phase A.

Column:
- size: l = 0.25 m, Ø = 4.6 mm;
- stationary phase: octadecylsilyl silica gel for chromatography R (5 μm).

1. Infrared absorption spectrophotometry (2.2.24).

2. Thin-layer chromatography (2.2.27).

Test solution. Dissolve 25 mg of amoxicillin trihydrate CRS in 10 mL of sodium hydrogen carbonate solution R.

Reference solution (a). Dissolve 25 mg of amoxicillin trihydrate CRS and 25 mg of ampicillin trihydrate CRS in 10 mL of sodium hydrogen carbonate solution R.

Plate: TLC silanised silica gel plate R.

Mobile phase: mix 10 volumes of acetone R and 90 volumes of a 154 g/L solution of ammonium acetate R previously adjusted to pH 5.0 with glacial acetic acid R.

Application: 1 μL.

Development: over a path of 15 cm.

Detection: expose to iodine vapour until the spots appear and examine in daylight.

System suitability: reference solution (b):
- the chromatogram shows 2 clearly separated spots.

Results: the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

C. Place about 2 mg in a test-tube about 150 mm long and about 15 mm in diameter. Moisten with 0.05 mL of water R and add 2 mL of sulfuric acid-formaldehyde reagent R. Mix the contents of the tube by swirling; the solution is practically colourless. Place the test-tube in a water-bath for 1 min; a dark yellow colour develops.

\( t_R \) = retention time of amoxicillin determined with reference solution (c)

If the mobile phase composition has been adjusted to achieve the required resolution, the adjusted composition will apply at time zero in the gradient and in the assay.

**Flow rate:** 1.0 mL/min.

**Detection:** spectrophotometer at 254 nm.

**Injection:** 50 μL of reference solutions (b) and (c) with isocratic elution at the initial mobile phase composition and 50 μL of test solution (b) according to the elution gradient described under Mobile phase; inject mobile phase A as a blank according to the elution gradient described under Mobile phase.

**System suitability:** reference solution (b):
- **resolution:** minimum 2.0 between the peaks due to amoxicillin and cefadroxil; if necessary, adjust the ratio A:B of the mobile phase.

**Limit:**
- **any impurity:** for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (1 per cent).

**N,N-Dimethylaniline (2.4.26, Method A or B):** maximum 20 ppm.

**Water (2.5.12):** 11.5 per cent to 14.5 per cent, determined on 0.100 g.

**Sulfated ash (2.4.14):** maximum 1.0 per cent, determined on 1.0 g.

**ASSAY**

Liquid chromatography (2.2.29) as described in the test for related substances with the following modifications.

**Mobile phase:** initial composition of the mixture of mobile phases A and B, adjusted where applicable.

**Injection:** test solution (a) and reference solution (a).

**System suitability:** reference solution (a):
- **repeatability:** maximum relative standard deviation of 1.0 per cent after 6 injections.

Calculate the percentage content of C₁₆H₁₉N₃O₅S from the declared content of amoxicillin trihydrate CRS.

**STORAGE**

In an airtight container.

**IMPURITIES**

A. (2S,5R,6R)-6-amino-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylic acid (6-aminopenicillanic acid),

B. (2S,5R,6R)-6-[[2S]-2-amino-2(4-hydroxyphenyl)acetyl]amino]-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylic acid (t-amoxicillin),

C. (4S)-2-[5-{4-hydroxyphenyl}-3,6-dioxopiperazin-2-yl]-5,5-dimethylthiazolidine-4-carboxylic acid (amoxicillin diketopiperazines),

D. \( R = \text{CO}_2\text{H} \): (4S)-2-{[[2R]-2-amino-2(4-hydroxyphenyl)acetyl]amino}[carboxymethyl]-5,5-dimethylthiazolidine-4-carboxylic acid (penicilloic acids of amoxicillin),

E. \( R = \text{H} \): (2RS,4S)-2-{[[2R]-2-amino-2(4-hydroxyphenyl)acetyl]amino}[methyl]-5,5-dimethylthiazolidine-4-carboxylic acid (penilloic acids of amoxicillin),

F. 3-(4-hydroxyphenyl)pyrazin-2-ol,

G. (2S,5R,6R)-6-[[2R]-2-amino-2(4-hydroxyphenyl)acetyl]amino]-2-{[4-hydroxyphenyl]acetyl]-amino]-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]-heptane-2-carboxylic acid (n-(4-hydroxyphenyl)glycylamoxicillin),

H. (2R)-2-{[2,2-dimethylpropanoyl]amino}-2-(4-hydroxyphenyl)acetic acid,

I. (2R)-2-amino-2(4-hydroxyphenyl)acetic acid,
Amphotericin B

**DEFINITION**

Mixture of antifungal polyenes produced by the growth of certain strains of *Streptomyces nodosus* or obtained by any other means. It consists mainly of amphotericin B which is practically insoluble in water, soluble in dimethyl sulfoxide and in propylene glycol, slightly soluble in dimethylformamide, very slightly soluble in methanol, practically insoluble in ethanol (96 per cent).

It is sensitive to light in dilute solutions.

**IDENTIFICATION**

First identification: B, D.

**TESTS**

**Related substances.** Liquid chromatography (2.2.29). Protect the solutions from light and use within 24 h of preparation, except for reference solution (c) which should be injected immediately after its preparation.

Solvent mixture: 10 g/L solution of ammonium acetate R, N-methylpyrrolidone R, methanol R (1:1:2 V/V/V).

Test solution. Dissolve 20.0 mg of the substance to be examined and reference substance at 60 °C at a pressure not exceeding 0.7 kPa for 1 h and record new spectra.

If the spectra obtained show differences, dry the substance to be examined and reference substance at 60 °C at a pressure not exceeding 0.7 kPa for 1 h and record new spectra.

C_{39}H_{73}NO_{17}

**Content:** minimum 750 IU/mg (dried substance).

**CHARACTERS**

**Appearance:** yellow or orange, hygroscopic powder.

**Solubility:** practically insoluble in water, soluble in dimethyl sulfoxide and in propylene glycol, slightly soluble in dimethylformamide, very slightly soluble in methanol, practically insoluble in ethanol (96 per cent).

**It is sensitive to light in dilute solutions.**
